Response to Arguments

The Office notes the following arguments:

- (a) Goss does not disclose receiving a web call and does not disclose an Internet session for exchanging information using call treatment or videoconferencing treatment.
- (b) Goss does not disclose identifying a web call center resource in response to receiving the call request message and generating and transmitting a routing instruction to route the web call to the web call center resource. Goss does not even disclose a web call center including a web call server and a web call center resource/web call center agent.
- (c) Goss does not connect a web call to a web call center resource.

Art Unit: 2157

(d) Goss does not determine whether any web call center resource is available to handle the web call in response to receiving the call request message. Consequently, Goss does not transfer a web call indicator to a web call queue in response to the determination that all web call center resources are unavailable.

(e) Goss does not identify a web service application for the web call in response to the call request message. Consequently, Goss does not generate and transmit an instruction to provide the web service application to the web call.

3. Applicant's arguments filed have been fully considered but they are not persuasive.

In response to:

(a) Goss clearly discloses a customer submitting a request via a companies' website on the Internet (web). An agent then establishes a TCP/IP communications session over the Internet with the customer (column 1, lines 62-64, column 2, lines 5-13, 36-38, 52-55, column 4, lines 17-19, 23-25). Therefore, Goss plainly discloses receiving a web call and an Internet session for exchanging information using call treatment or videoconferencing treatment. It is unclear to Examiner as to why this feature is questioned.

(b)-(c) Again, Goss undoubtedly discloses agents located at call centers to receive requests from customers. Once the call comes into the call center, it is distributed (routed) to the most qualified agent to assist the customer or either to an

Art Unit: 2157

agent that is available to assist the customer. Goss discloses the use of a Contact Server and CTI Server as well as web call agents (column 2, lines 1-2, 36-38, 52-55, column 3, lines 50-55, column 4, lines 18-21, column 6, lines 36-40, 45-47, 62-65, column 7, lines 1-5, 16-17, 26-27, 56-57, column 12, lines 57-59, column 13, lines 31-35). Therefore, Goss plainly discloses identifying a web call center resource in response to receiving the call request message and generating and transmitting a routing instruction to route the web call to the web call center resource and a web call center including a web call server and a web call center resource/web call center agent.

(d) Goss certainly discloses if an agent is not available, the Contact Server can be used to provide callback services. Also, if a qualified agent is unavailable to handle a call request, the call request is placed in a queue as well as the Contact Server sends a "not ready" message to the CTI Server so that no calls will be routed to that particular agent so that it can handle the waiting call (column 1, lines 62-67, column 2, lines 1-8, 14-16, column 5, lines 1-5, column 7, lines 1-10, 16-21). Therefore, Goss unquestionably discloses determining whether any web call center resource is available to handle the web call in response to receiving the call request message and transferring a web call indicator to a web call queue in response to the determination that all web call center resources are unavailable.

(e) Again, Goss indeed discloses providing the customer with documents or applications for which the customer may have questions about through the use of cookies or other session maintenance methodology. Specifically, applications such as trouble tickets, Java applets, billing services, shipments, invoices, etc. (column 1, lines

Art Unit: 2157

37-43, column 2, lines 61-67, column 4, lines 36-48, column 5, lines 15-18, column 6, lines 12-17, column 7, lines 33-38, column 8, lines 46-63). Therefore, Goss plainly discloses identifying a web service application for the web call in response to the call request message and generating and transmitting an instruction to provide the web service application to the web call.
